- I just collected some data and should store it in a database
- So, I have poured this data into some SQL tables I made
- I should now write some useful queries for some unique purpose
- Intelligence should result from these queries
- Right?

# I want to know

What is the relationship between ...

What EnsNum do I want ... ?

```
SELECT humanGene WHERE EnsNum LIKE "E%";
SELECT humanGene WHERE x00511204 like "16%";
SELECT err ... what's for lunch?
SELECT a soup and salad, I guess
```

- What was that pattern I was looking for?
- What happened to my quest to *extract meaning from my data*?

# Missing Discoveries?

Where did my idea go?

## What stumped my discovery?

- Discoveries in data are first imagined, then verified
- The patterns that we can find are limited by our imaginations to find a *testable* cases to query
- Is there a way to find relationships without first knowing that they could exist?!

# neo4j

- A visual database system using methods from graph theory to use networks to determine relationships (edges) and discover meaning from connected data-points (nodes). Users are able to interact with the data in a network.

- <https://neo4j.com/>
- Graphgists Projects: <https://neo4j.com/graphgists/>

# Networks of Data

Relationships exist by connectivity

A Missed  
Discovery

Neo4J

Start Neo4J

Open a  
Project

Play Time

Shutting  
Down

Consider this

- Nodes and edges represent inter-relationships
- Relationships are described by connections between nodes
- Single nodes have no immediate relationships with the others

# Networks in Neo4J

\$ :play movie graph

- Type `:play movie graph` in the editor at the top.

\$ :play movie graph

## Movie Graph

Pop-cultural  
connections  
between actors  
and movies

*The Movie Graph* is a mini graph application containing actors and directors that are related through the movies they've collaborated on.

This guide will show you how to:

1. Create: insert movie data into the graph
2. Find: retrieve individual movies and actors
3. Query: discover related actors and directors
4. Solve: the Bacon Path

- Let's follow the built-in tutorial of film data (i.e., Directors, Actors, Producers, etc.)
