

Introduction to Database Systems: CS312

Building Larger Database systems

A discussion of code

Oliver Bonham-Carter

25 Jan 2019

Overview of The Entity-Relationship Model Design

Consider these!

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This
...

Example
Code

- What is the *data* to store in the database?
- What are the *relationships* between the *entities* of information?
- What is the conceptual *design* of a system to link all this information together: the entity-Relationship (ER) model

The Writers Table

From last time...

Overview

Writers

Populate

Books

Single Tables

Queries

Linking
Tables

Consider This

...

Example
Code

Create Table command

```
DROP TABLE Writers;  
CREATE TABLE Writers (  
    id INTEGER NOT NULL PRIMARY KEY,  
    firstName VARCHAR(15) NOT NULL,  
    middleName VARCHAR(15),  
    lastName VARCHAR(15) NOT NULL,  
    birthDate VARCHAR(10) NOT NULL,  
    deathDate VARCHAR(10),  
    countryOfOrigin VARCHAR(20) NOT NULL  
);
```

- Drop Table: if available, remove old table during update
- .schema Writers
- Note: *attribute*₁ varchar(*n*) NOT NULL
 - A string of size (*n*) for *attribute*₁
 - NOT NULL: field does not take the NULL value

Adding Data to Writers Table

From last time...

Overview

Writers

Populate

Books

Single Tables

Queries

Linking
Tables

Consider This

...

Example
Code

Insert Commands

```
INSERT INTO Writers VALUES(1, "Francis", "Scott",  
    "Fitzgerald", "24Sept1896", "21Dec1940", "USA");
```

```
INSERT INTO Writers VALUES(2, "Arthur", "Conan",  
    "Doyle", "22May1859", "7July1930", "UK");
```

```
INSERT INTO Writers VALUES(3, "Ernest", "Miller",  
    "Hemingway", "21July1899", "2July1961", "USA");
```

```
INSERT INTO Writers VALUES(4, "John", "Edward",  
    "Williams", "29Aug1922", "3Mar1994", "USA");
```

Create Table command

```
DROP TABLE Books;  
CREATE TABLE Books(  
    id INTEGER NOT NULL,  
    title VARCHAR(15) NOT NULL,  
    year  VARCHAR(15) NOT NULL,  
    catagory VARCHAR(15) NOT NULL,  
    price NUMERIC(15) NOT NULL  
);
```

- .schema Books
- What does the “NOT NULL” command mean?
 - id INTEGER *NOT NULL*
 - title VARCHAR(15) NOT NULL,
 - price NUMERIC(15) *NOT NULL*
- The word, “NULL” may be added when an entry is missing.

Add Data to the Books Table

Overview

Writers

Books

Populate

Single Tables

Queries

Linking
Tables

Consider This

...

Example
Code

Insert Commands

```
/* Populate the table */
```

```
/* "Francis", "Scott", "Fitzgerald" */
```

```
INSERT INTO Books VALUES(1,"The Great Gatsby","1925","F",5);
```

```
INSERT INTO Books VALUES(1,"This Side of Paradise","1920","F",8);
```

```
INSERT INTO Books VALUES(1,"Tender is the Night","1934","F",9.50);
```

```
INSERT INTO Books VALUES(1,"A Life in Letters","1975","nF",15);
```

```
/* "nF" not written by this person */
```

```
/* "Arthur", "Conan", "Doyle" */
```

```
INSERT INTO Books VALUES(2,"The Hound of the Baskervilles","1902","D",6.50);
```

```
INSERT INTO Books VALUES(2,"The Adventures of Sherlock Holmes","1892","D",10);
```

```
INSERT INTO Books VALUES(2,"The Lost World","1912","D",13);
```

```
INSERT INTO Books VALUES(2,"The Valley of Fear","1915","D",6);
```

Add Data to the Books Table

Overview

Writers

Books

Populate

Single Tables

Queries

Linking
Tables

Consider This

...

Example
Code

Insert Commands

```
/* Populate the table */

/* "Ernest", "Miller", "Hemingway" */
INSERT INTO Books VALUES(3,"The Old Man and the Sea","1951","H",10);
INSERT INTO Books VALUES(3,"Men Without Women","1927","H",12);
INSERT INTO Books VALUES(3,"A Moveable Feast: The Restored Edition","2009","nH",15);
INSERT INTO Books VALUES(3,"Green Hills of Africa","1935","H",15);

/* "John", "Edward", "Williams" */
INSERT INTO Books VALUES(4,"Stoner","1965","W",27);
INSERT INTO Books VALUES(4,"Nothing but the Night","1948","W",14);
INSERT INTO Books VALUES(4,"Butcher's Crossing","1960","W",20);
INSERT INTO Books VALUES(4,"The Broken Landscape: Poems","1949","W",20);
```

Queries!

Using a Single Table

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This
...

Example
Code

Query in English

Show me all rows in the Books table

SQL programming

```
SELECT * FROM Books;
```

Show me all rows in the Writers table

```
SELECT * FROM Writers;
```

Show me only rows for writers in the table who are from USA

```
SELECT * FROM Writers WHERE countryOfOrigin ==  
"USA";
```

Queries!

- We have to connect the two tables in some way
- When populating the tables, a relationship was defined between the tables.

```
CREATE TABLE Writers (  
id INTEGER NOT NULL PRIMARY KEY,  
firstName VARCHAR(15) NOT NULL,  
middleName VARCHAR(15),  
lastName VARCHAR(15) NOT NULL,  
birthDate VARCHAR(10) NOT NULL,  
deathDate VARCHAR(10),  
countryOfOrigin VARCHAR(20) NOT NULL  
);  
  
CREATE TABLE Books(  
id INTEGER NOT NULL,  
title VARCHAR(15) NOT NULL,  
year VARCHAR(15) NOT NULL,  
category VARCHAR(15) NOT NULL,  
price VARCHAR(15) NOT NULL  
);
```

Queries!

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This
...

Example
Code

Show me all writers' lastnames, their book titles and the year their book was written.

```
SELECT Writers.lastName, Books.title, Books.year FROM  
Writers, Books WHERE Writers.ID == Books.ID;
```

Show me all books written by each of the writers.

```
SELECT Writers.lastName, Books.title FROM Writers, Books  
WHERE writers.ID == Books.ID;
```

Show me the lastname and book title of any work by someone whose first name is "Ernest."

```
SELECT Writers.lastName, Books.title FROM Writers, Books  
WHERE writers.ID == Books.ID AND Writers.firstName ==  
"Ernest";
```

Queries!

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This

...

Example
Code

Show me all writers' lastnames, birthdays, their book titles, the year the book was written and the price of their book.

```
SELECT Writers.lastName, Writers.birthDate, Books.title,  
Books.year, Books.price FROM Writers, Books WHERE  
Writers.ID == Books.ID;
```

Show me the above information, but only for books less than 12 dollars.

```
SELECT Writers.lastName, Writers.birthDate, Books.title,  
Books.year, Books.price FROM Writers, Books WHERE  
Writers.ID == Books.ID and price < 12;
```

Consider this ...

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This

...

Create some
tables

Example
Code

THINK

- Can you design and populate a database?
- Can you run queries to access particular attributes?

Try This: Create and Link Tables

You have previous example code to guide you

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This

...

Create some
tables

Example
Code

Department		
ID	Dept	RoomNum
JJ	CS	105
OBC	CS	104
AM	CS	106
GK	CS	108
PL	CS	110
DW	CS	112
MC	GEO	209
RO	GEO	203
SR	GEO	001
SS	GEO	201
KT	GEO	204

Tea		
ID	Tea	Sandwich
JJ	1	Ruban
OBC	1	PBJ
AM	1	Chicken
GK	1	Chicken
PL	0	Ruban
DW	0	PBJ
MC	1	Ruban
RO	0	PBJ
SR	1	Ruban
SS	1	Ruban
KT	1	Ruban

Session		
ID	Session	Material
JJ	101	pres
OBC	112	pres
AM	111	poster

Example code

Taken from last time...

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This
...

Example
Code

Query your
base

Create

```
CREATE TABLE department(  
    ID varchar(4),  
    Dept varchar(4),  
    RoomNum varchar(3)  
);
```

Populate

```
INSERT INTO department VALUES ("OBC","CP","104" );
```

Query each table

Overview

Writers

Books

Single Tables

Queries

Linking
Tables

Consider This
...

Example
Code

Query your
base

Single table

Show me all rows from each of the tables, individually.

Two tables

Show me the name, dept and whether the person will have tea.

Show me the name and dept of each person who will have a Ruban.

Three tables

Show me the sandwich type and the session room number of each person.

Can you think of other interesting queries here?
